EX.NO. 9 **Roll no: 210701518**

HADOOP DEMONSTRATE THE MAP REDUCE PROGRAMMING MODEL BYCOUNTING THE NUMBER OF WORDS IN A FILE

AIM:

To demonstrate the MAP REDUCE programming model for counting the number of words in a file.

PROCEDURE:

Step 1 - Open Terminal

```
$ su hduser Password:
```

Step 2 - Start dfs and mapreduce services

```
$ cd /usr/local/hadoop/hadoop-2.7.2/sbin

$ start-dfs.sh

$ start-yarn.sh

$ jps
```

Step 3 - Check Hadoop through web UI

// Go to browser type http://localhost:8088 – All Applications Hadoop Cluster

// Go to browser type http://localhost:50070 – Hadoop Namenode

Step 4 – Open New Terminal

```
$ cd Desktop/

$ mkdir inputdata

$ cd inputdata/

$ echo “Java Dart Java Hello World” >>input.txt

$ cat>> input.txt
```

Step 5 – Go back to old Terminal

```
$ hadoop fs –copyFromLocal /home/hduser/Desktop/inputdata/input.txt

/folder/hduser // Check in input.txt in Namenode using Web UI
```

Step 6 – WordCount Program

● Mapper.py

● Reducer.py

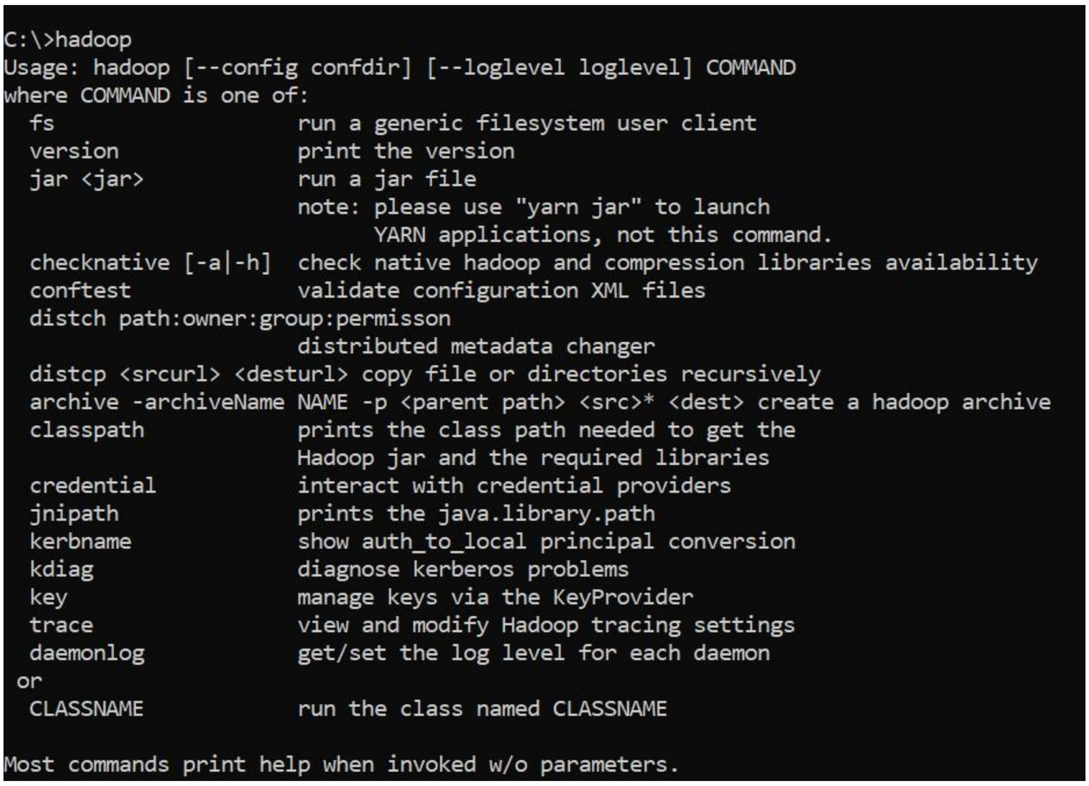
Mapper.py

```
#!C:/ProgramData/chocolatey/bin/python3.exe
import sys for line in sys.stdin: line =
line.strip() words = line.split() for word in
words:
        print('%s\t%s' % (word, 1))
```

Reducer.py

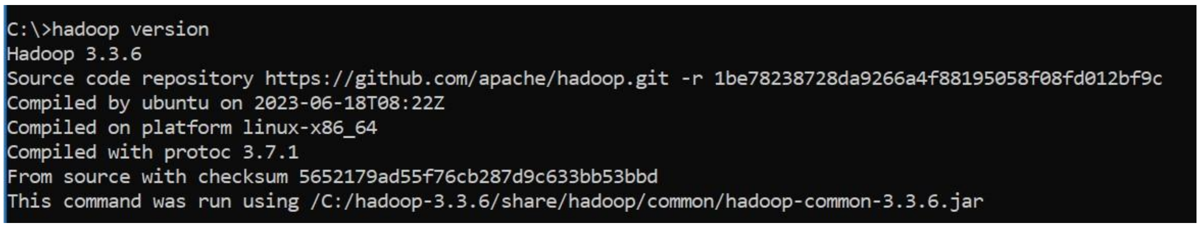
```
#!C:/ProgramData/chocolatey/bin/python3.exe
import sys prev_word = None prev_count = 0
for line in sys.stdin: line = line.strip() word,
count = line.split('\t') count = int(count)
if(prev_word == word): prev_count += count
else:
        if prev_word:
            print('%s\t%s' % (prev_word, prev_count))
        prev_count = count
prev_word   =   word   if
prev_word    ==    word:
print('%s\t%s'             %
(prev_word,
prev_count))
```

OUTPUT:



```
C:\>hadoop
Usage: hadoop [--config confdir] [--loglevel loglevel] COMMAND
where COMMAND is one of:
  fs                   run a generic filesystem user client
  version              print the version
  jar <jar>            run a jar file
                       note: please use "yarn jar" to launch
                             YARN applications, not this command.
  checknative [-a|-h]  check native hadoop and compression libraries availability
  conftest             validate configuration XML files
  distch path:owner:group:permisson
                       distributed metadata changer
  distcp <srcurl> <desturl> copy file or directories recursively
  archive -archiveName NAME -p <parent path> <src>* <dest> create a hadoop archive
  classpath            prints the class path needed to get the
                       Hadoop jar and the required libraries
  credential           interact with credential providers
  jnipath              prints the java.library.path
  kerbname             show auth_to_local principal conversion
  kdiag                diagnose kerberos problems
  key                  manage keys via the KeyProvider
  trace                view and modify Hadoop tracing settings
  daemonlog            get/set the log level for each daemon
 or
  CLASSNAME            run the class named CLASSNAME

Most commands print help when invoked w/o parameters.
```



```
C:\>hadoop version
Hadoop 3.3.6

Hadoop, 2023.

RESULT:

Thus the implementation of the python mapper and reducer programs using MapReduce to count the words in a text file using Hadoop is executed successfully.
